## Your Market Compass With PrimeKey Analysis

PrimeKey Analysis (PKA) is a proprietary framework developed by Navis that bridges the gap between raw data and human wisdom.

It combines rigorously back-tested data with proven insights and decades of our collective market experience to evaluate and grade assets by their risk-reward potential.

PrimeKey Analysis isn't a shortcut; it's a compass. It empowers investors to confidently grade and capitalize on opportunities while filtering out emotional hype, blind spots, and common decision-making fallacies. We look forward to hearing of the success you will achieve in your real estate investment journey with our methodology.

### PrimeKey Framework

- 1 **MRT Connectivity**  
Walking distance to train stations directly impacts livability, rental demand and widens the audience profiles – Typically the more convenient it is, the more desired it is.
- 2 **Growth Hotspot**  
Being located within or near a URA Masterplan growth hotspot historically delivers higher price growth over mature estates as new amenities and infrastructure attract investors.
- 3 **Government Land Sales / Enbloc Sites**  
Future releases of lands nearby fuel future growth, as land prices escalates over time historically – lifting asset values.
- 4 **Project Size**  
Larger developments enjoy lower density living, higher variety of facilities, higher resale volume and supporting valuations thereby reducing liquidity risks.
- 5 **Remaining Tenure**  
99-years leasehold properties typically go through a 3 stage life cycle - Growth, stagnation and declination. A healthy remaining tenure helps prevent equity decay and higher probability of a profitable exit.
- 6 **Rental Yield**  
Higher yields indicate strong demand, providing better cash flow for landlords and increased demand from potential investors.
- 7 **School Effect**  
Being within 1km to a popular primary school helps in enrolment probabilities and provides a consistent demand pool that parents are willing to pay a premium for.
- 8 **MOP Cluster (HDB Upgrader Demand)**  
Neighbourhoods with higher numbers of HDB flats reaching their minimum occupation period (MOP) dates generate natural demand as home owners are generally younger with stronger aspirational needs.

Detailed Breakdown

| # | Criteria                                      | Rating | Analysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---|-----------------------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | MRT Connectivity                              | 3★     | <p>The project is located an 11-minute walk from King Albert Park MRT Station, which falls within the 10-12 minute range qualifying for a 3-star rating.</p> <p>This walking duration provides moderate convenience for daily commuters, though it is slightly longer than the optimal 5-10 minute window.</p> <p>Compared to market norms, this distance may require additional time for residents during peak hours, but remains acceptable given the project's other strengths such as proximity to growth areas and schools.</p>                                                               |
| 2 | Growth Hotspots                               | 4★     | <p>The project is not located within the GHS Turf City but lies just 833 meters from its boundary, earning a 4-star rating.</p> <p>This proximity positions the project to benefit from nearby urban transformation, infrastructure upgrades, and increased market attention associated with the growth hotspot.</p> <p>Residents and investors stand to gain from spillover effects, including improved amenities and rising property values driven by public and private investments in the surrounding area.</p>                                                                                |
| 3 | Government Land Sales / Enbloc Sites Pipeline | 5★     | <p>The project is surrounded by nine confirmed or reserved Government Land Sales plots within a 2km radius, significantly exceeding the threshold for a 5-star rating.</p> <p>This concentration of upcoming land releases indicates substantial development potential and future supply pressure, which can drive long-term value appreciation.</p> <p>The presence of multiple high-profile GLS sites, including those along Dunearn Road and Holland Drive, signals strong interest from developers and reinforces the area's strategic importance in Singapore's urban planning landscape.</p> |
| 4 | Project Size                                  | 3★     | <p>The project consists of 212 units, which places it in the 200-299 unit range, qualifying for a 3-star rating.</p> <p>This size offers a balanced mix of community scale and manageability, avoiding the challenges of very large developments while still providing sufficient density to support amenities and services.</p> <p>Compared to smaller boutique projects, this scale allows for greater economies of scale in maintenance and management, though it may face more competition in the resale market over time.</p>                                                                 |

Detailed Breakdown

| # | Criteria         | Rating | Analysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---|------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5 | Remaining Tenure | 5★     | <p>The project has a leasehold tenure with 98 years remaining, which exceeds the 90-year threshold required for a 5-star rating.</p> <p>This long remaining tenure ensures that owners will retain full rights to the property for nearly a century, providing strong long-term ownership security.</p> <p>Given that the lease starts from 07/08/2025, the project is newly launched with minimal depreciation risk, making it highly attractive for both owner-occupiers and investors seeking enduring asset value.</p>          |
| 6 | Rental Yield     | 5★     | <p>The project offers a projected rental yield of 3.1% in the CCR region, which meets the 5-star threshold of 3.0% or higher.</p> <p>This yield is competitive within the Central Region and reflects strong demand for rental properties in well-located developments.</p> <p>The combination of good connectivity, proximity to elite schools, and upcoming GLS activity supports tenant demand, enabling landlords to achieve above-average returns relative to market benchmarks.</p>                                           |
| 7 | School Effect    | 5★     | <p>The project is located within 1km of one Elite-tier school—Methodist Girls' School (Primary)—which directly qualifies for a 5-star rating.</p> <p>This proximity is a significant advantage for families seeking top-tier education options, enhancing the project's desirability and resale value.</p> <p>Additionally, three schools are within 2km, further reinforcing the area's strong educational ecosystem and supporting long-term demand from family-oriented buyers.</p>                                              |
| 8 | MOP Cluster      | 1★     | <p>There are zero HDB or BTO units within 2km that reached MOP within the last 10 years or will reach MOP within the next 5 years, resulting in a 1-star rating.</p> <p>This absence indicates limited near-term demand from upgrader households, which could reduce buyer interest and slow resale turnover.</p> <p>Without a pipeline of new MOP-eligible units, the project lacks the dynamic demand boost typically seen in areas undergoing housing transition, potentially affecting short-to-medium term price momentum.</p> |

### Summary

Amberwood at Holland (Sim Lian) demonstrates strong investment appeal with excellent school proximity, high rental yield, and a long remaining lease.

The project is located within 11 minutes' walk of King Albert Park MRT Station, offering solid transit access.

It benefits from proximity to the GHS Turf City, situated just 833 meters away, positioning it well for future urban transformation and infrastructure upgrades.

With nine upcoming Government Land Sales plots within 2km, the area is poised for significant development activity.

The project comprises 212 units, placing it in the mid-sized category, and features a 98-year leasehold tenure, ensuring long-term ownership stability.

However, the absence of upgrader units within 2km suggests limited near-term demand from HDB buyers seeking to upgrade, which may affect resale dynamics.

Overall, the project presents a compelling opportunity for investors prioritizing rental returns and long-term capital appreciation in a well-connected, growth-oriented location.

### Target Buyer Profile

Ideal for investors seeking stable rental yields and long-term capital growth in a well-connected, future-ready location. Buyers interested in proximity to elite education, government-led urban renewal, and upcoming land sales are well-positioned. The project appeals to those who value access to major transport links, a long lease, and exposure to emerging developments in the Holland area, particularly those looking to benefit from spillover effects from the GHS Turf City and surrounding GLS sites.

### Investment Potential

Strong buy for investors focused on rental income and long-term capital appreciation. The project benefits from proximity to the GHS Turf City, with nine upcoming GLS plots within 2km driving future development momentum. Its 3.1% projected rental yield in the CCR region is excellent, supported by a 98-year lease and elite school access. While the lack of nearby upgrader units limits immediate demand from HDB buyers, the overall location advantages and strong fundamentals make it a resilient asset in a high-potential corridor.

### Key Rewards

- Highest capital appreciation probability due to GLS plots nearby creating new benchmark pricing. Including GLS Holland Plain, Holland Plain 2, GLS Dunearn Road (Left), GLS Dunearn Road (Right plot), GLS PineTree Hill, GLS Nava Grove, GLS Reserve Residences, GLS Holland Drive, GLS Bukit Timah Link
- Excellent rental returns for investors.
- High growth potential due to proximity to growth hotspot. Growth potential: 0.8 km to GHS Turf City growth hotspot
- Highest demand consistency in the long term — Elite-tier primary school within 1km. Including Methodist Girls' School (Primary) (0.89 km)
- Ideal for Home owners and Tenants due to proximity to MRT. It takes 11 min walk (1013m) to KING ALBERT PARK MRT STATION
- Good liquidity due of number of units. With 212 units
- No risk of lease decay affecting value.

### Key Risks

- Low demand from HDB upgraders in the near term.

INVEST WITH 20/20 VISION
